Business software that works for you.

Four practical management solutions for growing organizations.

2MS Developers builds software that makes everyday work simpler: organized records, clearer payments, faster service and useful business reports.

OUR SOLUTIONS

- School Management - students, parents, learning, fees and academic records.
- Restaurant & Lounge Management - digital menus, table orders, staff and business performance.
- Gym Management - memberships, check-ins, renewals and payments.
- Clinic Management - patients, visits, departments, billing and reports.

Flexible purchase options

Clients can discuss a **one-time purchase**, **monthly plan** or **yearly plan**. The selected package, included features, setup, training, support, hosting and any renewal charges should be clearly itemized in a written quotation. Prices and availability are confirmed during consultation.

01 SCHOOL MANAGEMENT

A connected school system for administrators, teachers, students and parents.

- Student admission, profiles, classes, sections and academic-year records.
- Attendance, homework, examinations, marks and result reports.
- Parent access from home to view their child's attendance, homework, results and school information.
- Clear fee breakdown: tuition, registration, transport or other configured charges; paid, due and remaining balances.
- Parents can pay school fees remotely from home through the supported payment setup.
- Daily, monthly and custom date-range payment reports for the school office.
- Archive each academic year while retaining historical student records.
- Generate student ID badges with QR codes for identification or supported check-in workflows.

HOW TO EXPLAIN IT TO A CLIENT

Parents stay informed without visiting the school, while administrators can track learning, payments and records across academic years.

02 RESTAURANT & LOUNGE MANAGEMENT

A single place to manage tables, orders, staff and financial performance.

- Digital food and drinks menu with organized categories and prices.
- Cashier-controlled menu and order entry for each table.
- Table-level orders, bill calculation, receipts and payment records.
- Track daily sales, expenses and payment methods.
- Manage employees and track staff salary records and salary payments.
- View monthly totals and net performance using recorded income and expenses.
- Review daily, monthly and selected date-range business reports.
- Monitor item sales and operational activity to support better decisions.

HOW TO EXPLAIN IT TO A CLIENT

From table orders to monthly income and salary tracking, the owner gets a clearer picture of how the restaurant is performing.

03 GYM MANAGEMENT

Keep member information, subscription periods and payments organized.

- Member registration and contact profiles.
- Membership packages with start dates, end dates and renewal tracking.
- Member check-in and attendance history.
- Break down membership charges, amounts paid and outstanding balances.
- Track monthly or annual membership plans where configured.
- Review active, expiring and expired memberships.
- Daily, monthly and date-range collections and membership reports.

HOW TO EXPLAIN IT TO A CLIENT

The gym can quickly identify active members, upcoming renewals and money collected without relying on notebooks.

04 CLINIC MANAGEMENT

Organize the patient journey from reception through care and billing.

- Patient registration and visit history.
- Reception and appointment or queue workflow.
- Doctor consultations and clinical notes.
- Laboratory requests and results across supported departments.
- Itemized charges for consultation, laboratory and other services, with payment and balance tracking.
- Receipts, daily collections and date-range reports.

HOW TO EXPLAIN IT TO A CLIENT

Reception, doctors, laboratory staff and cashier work with organized patient and payment information.

HOW TO SELL WITH CONFIDENCE

Start with the business owner's daily challenges. Show the relevant workflow instead of listing technical terms.

- Ask: What takes the most time today - records, payments, reports or staff coordination?
- Choose the matching system and demonstrate two or three important tasks.
- Explain the benefit in everyday language: less paperwork, better visibility and faster service.
- Confirm the exact features, integrations and deployment options in the client's version before promising them.
- Offer a written quotation with itemized setup, software, hosting, support and payment terms.

SOFTWARE PAYMENT OPTIONS

OPTION	HOW TO EXPLAIN IT
One-time	A single software purchase; setup, updates and support terms quoted separately.
Monthly	A recurring monthly subscription for the agreed package and services.
Yearly	A recurring annual subscription for the agreed package and services.
